

A NEW CONCEPT IN MICRO-VIEWERS

The Readex Universal Micro-viewer provides the highest quality enlarged image from all unitized microforms, both opaque and transparent. Magnification is 23X, featuring an increase in viewing area of 70% over our Model D Reader. A glare-free, green-tinted screen permits comfortable viewing for long work periods.

High quality optics have made low-wattage illumination feasible, thus eliminating heat filters and cooling blowers. The viewer is therefore silent and maintenance-free.

Unitized microforms up to 8" x 9" are held between hinged glass plates. The carrier assembly glides on a Teflon® coated plate which gives the operator smooth control over image selection at all times.

The case is molded of Borg-Warner Cycloc®, one of the finest and strongest of the engineering thermoplastics. It is virtually unbreakable. The case will retain its molded-in beauty for the life of the viewer.

The Readex Universal Micro-viewer is the only unit available today with the versatility to handle all microfiche as well as opaque materials such as Readex Microprint.
